Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.
2. This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.
3. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.
4. Group I, claim(s) 1-4, 9-18, 20, and 21, drawn to a surface treated steel sheet having epoxy containing top coating, wherein the epoxy is polyalkyleneglycol-modified.
5. Group II, claim(s) 5-8 and 19, drawn to a surface treated steel sheet having epoxy containing top coating, wherein the epoxy is blended with polyurethane.
6. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The corresponding technical feature relates to surface treated steel sheet, wherein the steel sheet is zinc or aluminum coated and surface treated to form a top coating that comprises epoxy resin reacted with hydrazine derivative, silane coupling agent, and phosphoric acid and/or hexafluorometal acid, as claimed. This subject matter is suggested by Matsuzaki et al. JP 2002-053979. See Matsuzaki et al. (Abstract; Claims; and paragraphs 58-76, 98, 99, 132-135, 142, 143). Matsuzaki et al. suggests including silane coupling agent and phosphoric acid in the top coating layer as minor additives. It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate these additives in minor amounts comparable to other suggested additives. The resulting compositions would be expected to possess claimed amounts of these additives, i.e., amounts on the order of one percent by mass and less. Since the corresponding technical feature among the claim groups is anticipated by the prior art, there is no special corresponding technical feature among the claim groups. Hence, there is a lack of unity of invention among the claim groups, and so restriction is appropriate.
7. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

Art Unit: 1775

requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

8. The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
9. Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
10. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
